

UNIT NUMBERING POLICY (August 2018)

It is extremely important that in an emergency the lot can be easily and accurately identified.

Therefore, all Units must display lot numbers meeting the following requirements.

- Numbers must be at least 3 inches high.
- The numbers or background for the numbers must be reflective.
- Lots that have lot numbers that are not reflective, but numbers are lit with a streetlight or a light on the lot that stays on between dusk and dawn will not have to change to reflective numbers.
- The preferred placement location is by the front door if it faces the street or the end of the unit facing the street. However, reflective numbers on posts, porch railings, etc. are acceptable if they are set back from the lot line on either side of the property so there is no confusion as to what lot the sign refers to.
- Properties that are occupied in a transient use, where campers move in and out frequently, should utilize numbers on posts as detailed above.
